**AVFAB COMPLETES CONSTRUCTION OF  
ADDITIONAL 10,500 SQ. FT FACILITY**

**Clinton, MO. December 16, 2002** – Aviation Fabricators (AvFab) has expanded their existing facilities through the addition of a new 10,500 square foot building dedicated to the production and overhaul of aircraft seating and other interior components. The new facility will be operational in late October and will boast expanded sheet metal and machine shops as well as composite panel design and production equipment. In addition, AvFab plans to outfit a portion of the new building with complete vacuum forming capabilities in the near future.

The new expanded production and overhaul center also increases raw material and work-in-progress storage. This will enable AvFab to reduce industry-low lead-times even more. As sources for available Original Equipment Manufactured replacement components become more limited, the addition of the new facility allows AvFab to continue to add more product lines to their Certified Repair Station (#GVRR304K) certificate.

All of AvFab's production and overhaul facilities work along with sister company Central Airmotive's enormous 40,000 square feet of OEM replacement inventory to provide the aviation industry with a single-source location for customized interior parts, modifications, certified repairs and Original Equipment Manufacture replacement.

AvFab specializes in the inspection, repair and overhaul of corporate aircraft interior components and is a FAA-PMA producer of custom aircraft seating. Central Airmotive is a comprehensive, large-inventory supplier of Original Equipment Manufacture interior products such as seats, divans, tables, toilets, cabinets and dividers. Together they represent a "one-source" solution to any corporate aircraft interior need.
