## **AVFAB RECEIVES STC FOR KING AIR 300 & 350 COMMUTER SEATS**

**Clinton, MO – December 23, 2004** – Aviation Fabricators (AvFab) is pleased to announce that it has recently received Supplemental Type Certificate (STC) approval for the manufacture of King Air 300 and 350 Commuter Seats. The company, specializing in the manufacture and repair of aircraft interior seating and components, already holds the Commuter Seat STC for the King Air 90, 100 and 200 series aircraft. The addition of the 300 and 350 series aircraft ensures that virtually any King Air can be outfitted with these durable, hinged-back commuter seats.

AvFab has engineered their commuter seat design to eliminate the need for repairs or maintenance in response to those owners who have had trouble with the durability of other commuter seats. In fact, AvFab is so confident in their robust design, a five-year parts and labor warranty is included at no extra cost, making these seats one of the most warranted items on the airplane.

No airframe modification is required, other than removing the existing seats and furnishings and sliding the new high-density commuter seats into the existing seat rails. Complete installation instructions, diagrams and weight and balance are included with each kit. The seats come painted, but can be fitted with foam and upholstery for an additional fee.

King Air operators who are looking to maximize capacity of their aircraft can also order the AvFab King Air Aft Jump seat kit which can be installed economically in conjunction with each ship set of Commuter Seats. For more information on this product or to see what other utility enhancing products are available for King Air aircraft, please visit [www.avfab.com](http://www.avfab.com). Also noteworthy is the fact that any executive interior components removed for the installation of new commuter seats or other products may have substantial trade-in value. Please call AvFab direct to discuss any trade-in options that may exist.

AvFab not only provides FAA-PMA custom aircraft seating with STC approvals, but it is also an inspection, repair and overhaul facility centered around serving the seating and interior component needs of corporate aircraft. AvFab's sister company, Central Airmotive, is a comprehensive supplier of Original Equipment Manufacture interior products such as seats, divans, tables, toilets, cabinets and dividers. Central Airmotive currently has over 80,000 sq. ft. of OEM seats and cabin components. Together they represent a "one-source" solution to any corporate aircraft interior need. For more information on any of the products offered by AvFab, please call (660) 885-8317.
